The **FUEL FILTER FUNNEL by Smart Tech** is a heavy-duty, fast-flow filter in a funnel that separates damaging free water and crud from GASOLINE, DIESEL, KEROSENE and MIXED 2-CYCLE FUELS. Don't add water and harmful contaminants to your fuel tank.

Keep in mind when you are refueling from storage containers:

- ≠ When metal is wet-- it rusts and leaves contamination in your gas.
- ≠ Plastic attracts dirt
- ≠ Fuel will gather dust, water, and airborne microbes when exposed even briefly to air, rain or blowing snow.

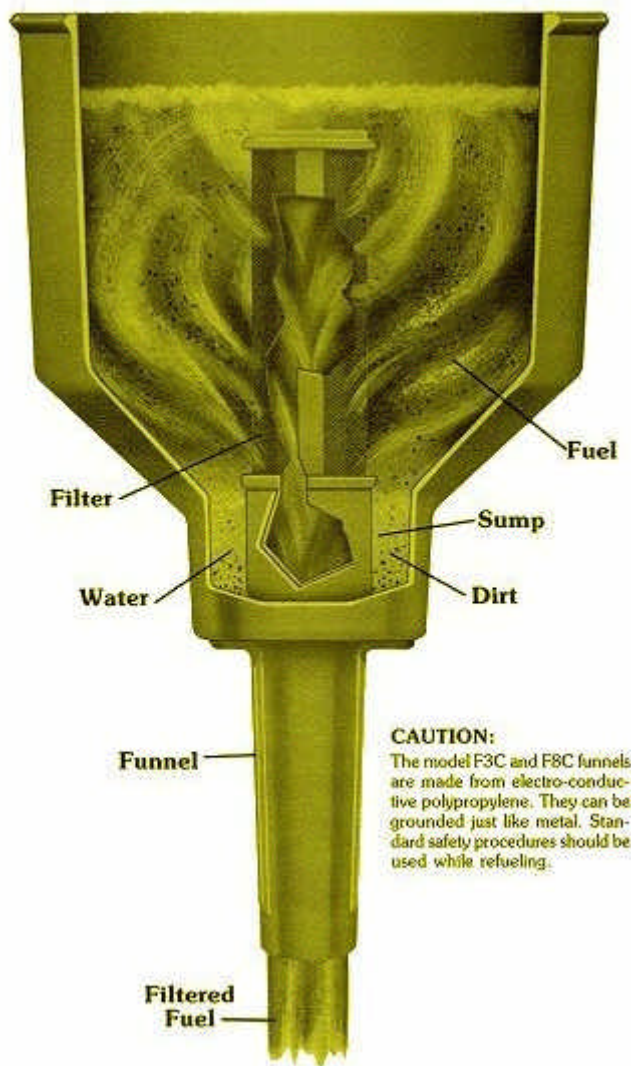

Water and solid contaminants can ruin the performance of your carburetor or fuel injector in a hurry.

So, don't let these harmful contaminants stop you...use the **FUEL FILTER FUNNEL by Smart Tech**.

With the **FUEL FILTER FUNNEL by Smart Tech**, you can filter out free water and solids down to .005 inch (read "Filter Tips" for explanation on free water). Inspect the integrity of your fuel supply as you refuel with the **FUEL FILTER FUNNEL by Smart Tech**. Dirt and water are practically unavoidable in stored fuel, causing microbial growth, corrosive acids, electrolysis, and rust. These contaminants can restrict fuel flow, plug filters, corrode fittings, decrease the energy level of fuel, and cause engine damage and system failure. You can combat these problems by refueling with the **FUEL FILTER FUNNEL by Smart Tech**. Every time you transfer fuel from one container to another you should pass it through the **FUEL FILTER FUNNEL**.

FUEL FILTER FUNNEL by Smart Tech is manufactured using black industrial standard electro-conductive polypropylene (not applicable to colored FICs). The funnel can be grounded for extra safety during the refueling process. Visit the following sites to learn why static electricity can definitely spoil your day...
