

Midi-Sleeve Frontlight

MIDI-SLEEVE NOW ALSO WITH FRONTLIGHT

The very popular, literally dotless Midi-Sleeve LED Tape family has been expanded with a new model. It now exists in two versions: Side light and - new - Front Light. Both are available in a variety of colour temperatures (Kelvin) and are all of the highest light quality with a CRI over 90.

The Side Light option is intended to be pushed into 4mm grooves to make them completely disappear, so just the dot-less light exits from the groove from the side of the tape. Alternatively, a new aluminium profile can be used for mounting (see press release for the aluminium profile).

The new Front Light option, however, is intended to be glued behind skirtings or in cupboards. It comes preinstalled with capable adhesive tape, for easy installation.

The LED-tape is simply glued directly onto GRP or wood and can even be bent slightly to follow the boat's hull contour. As with the Midi-Sleeve Side Light it can be cut to desired length, is easily soldered for power supply and, if sealed off at the cut end, provides splash-resistance.

The Midi-Sleeve Front Light is the successor of our popular 600-tape, which is still available on special request. The new Midi-Sleeve series will simplify installation on the after market and save cost for new-build yards.
